

Proposal for Lucky in Love

AI Readiness Assessment & Growth Sprint

Brad,

Lucky in Love is built on five generations of apparel DNA — your great-grandfather designed WWI army uniforms, your grandfather founded Covergirl Dresses of Miami, and your mom and uncle built Tail into a category-leading brand. When you founded LIL in 2010, you spotted a void in women's tennis apparel and filled it with a point of view. Fifteen years later, you're distributing through 2,000+ pro shops, country clubs, and retail partnerships across the US and Europe, collaborating with K-Swiss and Simone Jardim, and building a 35,000-person community on Instagram.

The challenge you named at dinner is operator-tight but systematic: the back end (ERP, CRM, email, dashboards, reporting) has grown slower than the brand. Your teams have Shopify, Klaviyo, and Okendo in place, but they are not yet orchestrated. And you have zero AI tooling in the wholesale engine — the 2,000 pro-shop accounts managing your fate with no data-driven account briefs or demand forecasting.

This is exactly the gap Bogen.ai closes — not by replacing your team, but by professionalizing the operating system you already have. Done right, this engagement positions Lucky in Love as **the AI-native apparel brand before the industry sees it coming** — and gives you the data infrastructure to defend that position for the next decade.

The Opportunity

Current State

- Back-end silos: ERP, CRM, email, analytics in separate islands
- Wholesale blindness: 2,000 pro-shop accounts with zero AI-driven account briefs
- Manual reporting load: Competitive research, demand forecasting, email campaigns still spreadsheet-driven
- DTC underperformance: Klaviyo unsegmented, no AI product recommendations

Post-Engagement State

- Unified operations view: Real-time dashboards across all systems
- AI-powered wholesale: Automated account briefs, trend alerts, demand forecasts
- Content velocity: Competitive research and campaigns AI-assisted at scale
- Customer intelligence: Sport-segmented lifecycle and AI recommendations

Approach: Two-Phase Engagement

Phase 1: AI Readiness Assessment (30 days, \$2,500 flat)

Deliverable: A 20-page written assessment covering:

- ERP + CRM + Shopify + Klaviyo audit (integration feasibility, data quality, automation readiness)
- Seven prioritized AI opportunities ranked by impact and effort
- Estimated investment and timeline for each
- Phase 2 scope recommendation + fixed investment

Timeline: 30 days from kickoff. Kill-switch clause: if you are not convinced of value by Day 30, engagement ends with no obligation beyond the \$2,500 assessment fee.

Why this shape: The assessment is a standalone deliverable. You get actionable intelligence whether or not Phase 2 happens. And the assessment data becomes the basis for Phase 2 pricing — no guessing.

Phase 2: 90-Day AI Integration Sprint (Scope-Dependent)

If the assessment reveals high-impact, achievable opportunities, Phase 2 launches immediately.

Typical timeline:

- **Weeks 1–3:** Systems integration (ERP tap-in, Shopify/Klaviyo orchestration, dashboard scaffolding)
- **Weeks 4–8:** AI build-out (wholesale account brief generator, DTC lifecycle flows, demand forecast pipeline)
- **Weeks 9–12:** Optimization (user testing, rep training, performance validation, handoff documentation)

Investment Range: \$25,000 – \$125,000 fixed fee, depending on scope. Benchmarked against mid-market AI consulting engagements at your scale.

Optional: Month 4+ retainer (\$8,000–\$12,000/month) for ongoing optimization, new integrations, and AI model tuning.

THE MATH ON YOUR SIDE

Lucky in Love distributes through ~2,000 pro-shop accounts. At a conservative **\$20K average annual wholesale per account**, that's a **\$40M wholesale book**.

Industry benchmarks for AI-powered account-brief generators paired with demand-forecast pipelines show **3–7% incremental wholesale lift in year one**. At 3%, that's **\$1.2M in incremental annual revenue**. At 5%, \$2M.

Your Phase 2 investment (\$25K–\$125K) returns 10–80X in year one. This is the cleanest ROI math in any line of your business.

Phase 2 Scope Tiers

Phase 1 confirms which tier fits your operation. You pick. Each tier delivers in 90 days under milestone-based payment. This menu replaces the typical AI-consulting guessing game.

	RECOMMENDED	
Foundation \$25,000 ✓ Wholesale account brief generator (rep enablement) ✓ Sport-segmented Klaviyo lifecycle (DTC) ✓ Unified ops dashboard (v1) ✓ Team training + handoff documentation You become: the operator who validated AI before anyone in the apparel category.	Growth \$60,000 ✓ Everything in Foundation, plus: ✓ Demand forecast dashboard (inventory + buy planning) ✓ AI product recommendation engine (Shopify) ✓ Competitive research + trend alerts ✓ First-quarter model tuning included SIGN WITHIN 21 DAYS — BONUS STACK ✓ 30-day model tuning extension (post-sprint) ✓ Quarterly executive AI briefing for 12 months ✓ One additional team member trained on the system You become: the brand that turned 2,000 accounts into 2,000 data signals.	Enterprise \$125,000 ✓ Everything in Growth, plus: ✓ ERP deep integration (real-time data flow) ✓ Custom Claude Project for executive Q&A ✓ Wholesale rep mobile workflow (brief on demand) ✓ Onsite training day + 90-day post-sprint optimization You become: the fifth-generation founder who built apparel's next operating system.

Phase 1 credit: The \$2,500 assessment fee credits in full against your selected tier. | **Payment:** 40% on signature / 30% mid-sprint / 30% on delivery. | **Timeline:** 90 days from kickoff, every tier.

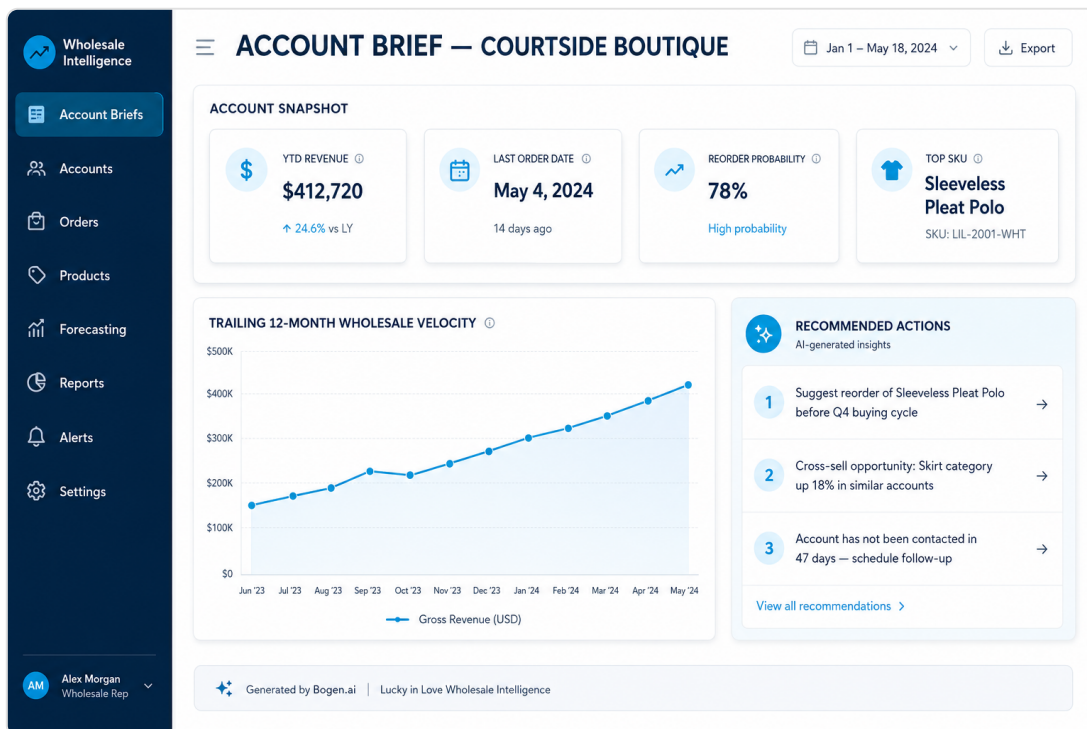

Phase 2 Deliverables (Master Menu)

- ✓ Weekly automated account brief generator (wholesale rep enablement)
- ✓ Demand forecast dashboard (inventory + buy planning visibility)
- ✓ Sport-segmented email/SMS lifecycle (DTC customer journey)
- ✓ Competitive research dashboard (trend alerts + tea-leaf reading)
- ✓ AI product recommendation engine (Shopify)
- ✓ Team training + live guidance sessions

Example Deliverables — What You and Your Team Will See

Two live previews from the Phase 2 build. Account labels, metrics, and AI recommendations shown are illustrative.

What your wholesale team sees — AI-Generated Account Brief

Each of your 2,000+ pro-shop accounts gets a brief like this, auto-generated, delivered to your reps weekly.

What you see — Executive Command Center

Your morning briefing — top accounts, revenue mix, inventory health, and the three things AI flagged as worth your attention this week.

Investment & Terms

Phase 1: AI Readiness Assessment

Fee: \$2,500 flat

Payment: Due upon signature

Refund Policy: If the assessment does not surface at least three opportunities with projected annual ROI of 5X or more (supported by industry benchmark data), full refund.

Timeline: 30 days

Kill Switch: Full stop, no Phase 2 obligation, if you are unsatisfied

Phase 2: Integration Sprint (if Phase 1 confirms scope)

Fee Range: \$25,000–\$125,000 fixed, determined during Phase 1

Payment Terms: 50% on signature, 50% on delivery

Performance Guarantee: If Bogen.ai does not deliver defined Phase 2 milestones within the sprint window, pro-rata refund for incomplete work

Performance Bonus (Optional Upside)

Trigger: If wholesale revenue in the 90 days following Phase 2 delivery exceeds the prior comparable quarter by 3% or more

Bonus: 5% of the incremental wholesale lift, capped at \$25,000

Why: Aligns Bogen.ai directly with measurable outcome. No bonus if no lift — pure upside to you.

Ongoing (Optional)

Retainer: \$8,000–\$12,000/month, Month 4+

Scope: Continuous optimization, new AI model training, new integrations

Why Bogen.ai

Edmund Bogen — Founder

Keynote speaker, author of Prompt to Close, and co-founder of Edmund's Mastermind (14,000-member community of realtors and entrepreneurs adopting AI at scale). Edmund's background is South Florida luxury real estate — the same affluent, relationship-driven, detail-obsessed buyer persona as your country club and pro-shop customer base. He understands the market. He understands the operator mindset.

Eytan Benzeno — Co-Founder & AI Engineer (Primary Technical Executor on This Engagement)

AI engineer and Edmund's technical partner. **Eytan leads the technical execution on this engagement** — building the Claude Projects, custom AI models, data pipelines, and Shopify / Klaviyo / ERP integrations. Edmund holds strategy, client accountability, and delivery oversight. Eytan does the build. This is by design — it gives Lucky in Love a dedicated senior AI engineer for the full 90 days.

Our Approach

We do not build software. We integrate AI into your existing systems (Shopify, Klaviyo, your ERP) and train your team to own the workflows. We are not a vendor. We are a founder-friendly operator who happens to think in AI.

You retain ownership of: platforms, workflows, customer relationships, operational control, and business data.

How We Compare

You'll likely evaluate three alternatives. Here's the honest read:

Tier-one consultancies (McKinsey, Deloitte Digital, Bain)

Excellent at board-level transformation work. Built for 12-month engagements at \$500K+, typically staffed with junior consultants under partner oversight, ending in a polished deck. Overbuilt for a 90-day AI integration on a \$40M wholesale book.

Platform specialists (Klaviyo agencies, Shopify Plus partners, freelance ERP consultants)

Strong at tactical execution on a single platform. Limited at orchestrating across Shopify + Klaviyo + ERP + wholesale workflows as a unified intelligence layer — which is the actual problem you're solving.

An internal hire (Head of Data, VP of Digital)

The right long-term move. Takes 4–6 months to recruit, \$200K+ in fully-loaded compensation, and another 6–9 months of ramp before they produce output. This engagement is what gets you to "ready for that hire" — they inherit a working system instead of a blank page.

Bogen.ai is built for the founder-operator who needs senior AI execution in 90 days, fixed-fee, with the same people writing strategy and doing the build. No hourly meter. No offshore handoff. No 9-month timeline.

Selected Engagements

Anonymized for client confidentiality. References available on request following NDA.

Multi-agent luxury real estate operation (Southeast US, 80+ agents)

Deployed AI-driven lead routing, automated client briefs, and a weekly market intelligence pipeline. Standardized how a fragmented producer team consumed and acted on market data.

Regional brokerage with 2,000+ contact database

Klaviyo segmentation overhaul, automated nurture sequences, and AI-generated CMA delivery system. Lifted reply rates on dormant contacts and eliminated manual report production.

Coaching/membership operator scaling past 100 members

Built member onboarding automation, billing reconciliation system, and retention dashboards. Operator visibility moved from monthly spreadsheets to real-time view.

Hospitality + real estate operator (South Florida)

Operations AI deployment, executive reporting infrastructure, and content automation across multiple business lines under one parent operator.

Risk & Guarantees

Scope Discipline

Phase 1 covers ERP feasibility assessment and opportunity scoring. It does **not** include creative production, paid media spend, photography, or platform migration. Those are separate conversations.

AI Transparency

AI models are directional, not oracular. Our job is to augment your judgment, not replace it. All AI outputs require your team's final decision and approval.

Data Handling

Customer data you share (lists, purchase history, etc.) is treated as confidential and deleted upon Phase 2 completion. Generalizable AI frameworks we build (account brief generator, demand forecasting model, product recommendation engine) are Bogen.ai IP, **licensed to Lucky in Love on a perpetual, royalty-free, non-exclusive basis** for your continued use post-engagement.

Money-Back Commitment

Phase 1 assessment is outcome-guaranteed: surface three viable opportunities or refund. Phase 2 is performance-guaranteed: deliver defined milestones or pro-rata refund.

Next Steps

1. **Mutual NDA** — Signed by both parties before the kickoff call (separate one-pager, sent alongside this proposal).
2. **Sign & Return** — This proposal is ready. Execution agreement follows the kickoff call.
3. **Kick-Off Call** — Within 3 business days. 60 minutes with you + point of contact for ERP and wholesale accounts.
4. **Phase 1 Starts** — Day 1 of 30. We audit, you operate. Weekly check-ins.
5. **Day 30 Delivery** — Assessment report in your inbox. We discuss Phase 2 or part as friends.

Content & Case Study Partnership

Direct ask: If we deliver, would you be open to documenting this engagement publicly? Lucky in Love becomes the apparel industry's flagship case study in AI integration, and Bogen.ai earns the right to point to your name when working with peer founders.

Specifically, if Phase 1 and Phase 2 succeed, Bogen.ai would like to:

- Reference Lucky in Love by name in speaking engagements and case studies (with your approval on any metrics shared)
- Produce a brief video case study or LinkedIn post documenting the engagement
- Invite you as a guest on Edmund's Mastermind community or podcast

This is how we build Bogen.ai's credibility in the apparel / DTC / luxury space. Your permission is optional, but deeply appreciated.

Durable rights: Bogen.ai retains the perpetual right to use anonymized engagement metrics and methodology references in marketing materials. Named use of "Lucky in Love" or "Brad Singer" remains subject to your written approval and can be revoked with 30 days notice.
